

# Running Successful Clinical Programs Using a Functional Service Provider (FSP) Model

## How an FSP Model Can Minimize the Risks of Failure and Missed Milestones

The biopharmaceutical industry is innovating and developing new treatments so rapidly that resourcing demands are outpacing the current available talent pool. Within this dynamic environment, life sciences leaders expect their external partners to help them find creative ways to achieve scientific progress even during times when the level of inhouse resources is less than ideal. They know that a carefully constructed team can contribute greatly to a successful outcome.

In this fact sheet, we highlight Veristat's customized FSP strategic approach and the advantages that an FSP model delivers.

## Resourcing Solutions Driven by **Sponsor Requirements**

When a clinical development milestone is missed due to lack of personnel, the consequences can be quite serious. At Veristat, we have aggregated significant and relevant experience crafting customized resourcing solutions throughout the clinical development lifecycle and can provide knowledgeable experts even in the most challenging clinical settings.

#### Skill/Expertise Level:

- > By years of experience: Sr., Jr., entry-level
- > By area of expertise: biometrics regulatory, PVG, etc.
- > By job titles
- > By technical/system knowledge

#### Scope and Duration:

- > Length of time: days, months, years, etc.
- > Hours per week: full-time, fractional, hourly
- > Project, unit-based or milestone

#### Systems & Processes:

- > Veristat systems/
- > Client systems/SOPs
- > Hybrid version of both

#### Management of Resources:

- > Veristat manages
- > Client manages
- > Hybrid version
- > Governance
- > Oversight & management of people

#### **Location of Resources:**

- > Onsite
- > Virtual/remote
- > Various regions around world

Our bespoke engagement model is driven by your requirements and custom-tailored to your unique business needs

### Establishing an Expert Team

With our FSP solution, a pipeline of discipline-specific expertise is available and ready to seamlessly integrate into your dynamic clinical environment. Veristat resources support work across many disciplines including:

- > Biostatistics, programming and data management
- > Regulatory consulting
- > Clinical operations including clinical monitoring
- > Project management

- > Site management
- > Medical affairs/safety
- > Medical/regulatory writing
- > Pharmacovigilance

Our FSP model provides deployment flexibility to support sponsors in the manner that they determine best.

### **Impact**

Veristat supported 10+ sponsors/clients with FSP placements in 2022

# Projects	Deployments
5 Regulatory Projects	A large genetic company needed a Regulatory Strategist for a 12-month contract for ad hoc regulatory work
	A biologics company needed a Regulatory Consultant to review and edit manuscripts for 3 biosimilars
2 Projects with Data Managers	A mid-sized clinical stage oncology company needed a Data Manager to support their team
2 Projects with Programmers	A large biotech needed a Statistical Programmer for 10 months to complete a project
1 with Clinical Site Management	A small biotech firm needed a Site Management lead to supplement their clinical operations team for an ongoing ophthalmology trial

Clinical study leaders work with Veristat to address their limited capacity challenges across all functions of novel drug development. We supply hard-to-find and highly skilled scientific resources that seamlessly integrate into your in-house processes and environments and satisfy your needs for flexibility, control and speed.

Specialized, demand-driven resourcing from Veristat ensures your focus remains where it should be: meeting study milestones and accelerating time to market.
